

**CHINA: HEILONGJIANG DABAISHAN WIND POWER PROJECT**

Kyoto Mechanism:	Clean Development Mechanism
Project Category (UNFCCC):	ACM0002 „Consolidated baseline methodology for grid connected electricity generation from renewable sources”
Location:	Yichun City, Heilongjiang Province, Northeast-China
Emission Reductions purchased:	410.000 t CO <sub>2e</sub>

The Heilongjiang Dabaishan Wind Power Project consists of the construction and operation of a wind park located in Yichun City, Province of Heilongjiang in the Northeast of China. The project proposes to install 33 sets of 1500 kW turbines, for a total installed capacity of 49.5 MW. It is estimated that the park will annually generate 120.8 GWh of electricity.

The generated electricity will be fed into the Northeast China Power Grid. By the replacement of electricity generated by fossil fuel fired power plant, the project will annually generate 138,425 tons of CO<sub>2e</sub>.

Furthermore, the project will create 100 new jobs during the construction stage and another 30 new jobs during the operating stage.
